

Pathway 3: Existing & Approved Organisations

LICENSED & FORMALLY ALIGNED PARTNERS

This pathway is reserved exclusively for organisations that have completed the TPS alignment process and hold an active license or formal approval status. If your organisation has been through the Clinical Orientation & System Alignment Review, has satisfied all governance and compliance requirements, and has received formal TPS approval, this is your designated access point for ongoing operational resources and service management.

The **TPS Service Hub** provides approved organisations with centralised access to clinical resources, operational documentation, continuing education materials, and direct support channels. It is designed to serve as the operational backbone for organisations delivering TPS-aligned post-acute trauma support within their care pathway – ensuring consistency, compliance, and continuous quality improvement across all approved delivery settings.

If your organisation believes it should have approved status but is unable to access the Service Hub, please contact the TPS administration team directly to verify your licensing record. Access to the Service Hub is limited to formally approved organisations to preserve framework integrity.

Clinical Resources

Access up-to-date clinical documentation, treatment protocols, and evidence-based guidance for TPS-aligned care delivery.

Operational Documentation

Retrieve governance documents, compliance templates, audit frameworks, and pathway management tools.

Continuing Education

Access professional development resources, training modules, and certification pathways for clinical and administrative staff.

Direct Support

Connect with the TPS clinical and administrative support team for pathway-specific guidance and operational assistance.
